

Who are British Sugar?

British Sugar are one of the most efficient sugar producers in the world and their four advanced manufacturing plants across East Anglia and the East Midlands are renowned for their engineering and technological prowess.

They have created a vibrant and globally competitive British success story that not only is the leading producer of sugar for the British and Irish food and beverage markets, but that can also compete on an equal footing with any sugar processor in the world.

"Apprenticeships are a fantastic way to learn without needing to go to university. You can still progress and achieve your goals without having a diploma! Whichever route you take after leaving school, an apprenticeship should be one of the options that is considered, especially if you aren't fully set on university. For myself, I wanted to fully change my career and wanted a challenge I could really set my mind to."

- **Samantha Glenn**
Process Technician
